

Public Discussion #4: Improving the MySQL Community Contribution Experience

Safe Harbor Statement

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

MySQL Community Engagement Strategy

- Deliver Innovation into Community Edition
- Expand and Grow the Ecosystem
- Increase Transparency & Community Participation
 - Phased approach
 - **Phase 1:** Utilize existing tools for next release with more transparency; publish and act on roadmap, establish baseline metrics and goals
 - **Phase 2:** Increase transparency, openness, and contributions; add more and build on existing tools
 - **Phase 3:** Evaluate and Iterate
- <https://blogs.oracle.com/mysql/new-era-of-mysql-community-engagement>

Release Information

Next version is scheduled for July

We will to identify Enterprise features that can be rolled into Community Edition

Early Access Releases will be published on regular cadence

Release Information

CVE information is available on
<https://dev.mysql.com/community/>

Continue to publish worklogs

Updated bug status in external bug
tracking system

Deliver features/functionality that align
with our Community Roadmap

MySQL - Community Roadmap

Planet MySQL Updates

Work has started on the
planned updates

Filtering updates

Identified issues with
aggregating some blogs

Improving the MySQL Community Contribution Experience

Why This Matters?

Current contributor experience can be hard to navigate

Contributors need clearer expectations

The goal is not just “more PRs”

The goal is higher-quality collaboration and clearer paths to contribution

Desired Outcome

Clearer starting point
for contributors

Separate paths for:
Bug reports
Bug fixes
Feature requests
Documentation Improvements
Testing and Feedback

Better visibility into
status and
expectations

Guiding Principles

01

Make contribution
easier to understand

02

Preserve MySQL
quality,
compatibility,
stability, and
security

03

Encourage
discussion before
code when useful

04

Reduce unnecessary
friction before
implementation

05

Keep public artifacts
linked and traceable

Contribution requirements

MySQL Community Developer Guide as the central starting point

Code contributions require Oracle Contributor Agreement

New feature requests should include a MySQL Community Design Proposal

Review contribution requirements before submitting

Contribution Paths

I found a bug

A reproducible problem, regression, unexpected behavior, or compatibility issue that should be investigated

I want to fix a bug

A proposed code change that addresses an existing issue or improves an affected area

I want to propose a new feature

A request for new or changed functionality based on a clear use case or community need

I want to improve documentation

A correction, clarification, example, or missing guidance that would help users or contributors

I want to test new functionality

Feedback from trying a release, preview build, bug fix, or new feature in a real or representative environment

What we need for each path

Bug report

Version, platform, reproduction steps, expected result, actual result, logs or test case

Bug Fix/Patch

Related bug or issue, proposed change, tests, OCA confirmation

New Feature Request

Clear use case, expected behavior, compatibility impact, completed design proposal

Documentation Improvement

What is unclear, missing, incorrect, or could use an example

Test and provide feedback

Version tested, platform, steps tested, observed behavior, regressions or compatibility concerns

Current Workflow: MySQL Bugs Database

Proposed Changes – GitHub Centered Contributions

GitHub Issues for
feature requests
and bug reports

GitHub Discussions
for technical
conversations

Pull requests for
code review

Automated checks
where possible

Linked issues, PRs,
design proposals,
and bug records

The Transition

Start where
GitHub
provides
immediate
value

Use GitHub
for feature
requests
and
technical
discussion

Continue
improving
Bugs
Database
workflow

Add
templates
and
checklists

Connect
current
systems
with
GitHub

Move
toward
GitHub-
centered
workflow
over time

What success looks like

- Contributors know where to start
- Maintainers receive more complete submissions
- Less back-and-forth during triage
- Clearer status and ownership
- Better connection between feedback, review, and implementation
- Higher-quality community collaboration

Contributors Summit May 2026

2026 MySQL Contributor Summits

Tuesday, May 26, 2026

Redwood Shores, CA
Hybrid Attendance
Sessions will be recorded

SAVE THE DATE!

Next Summit
Aug 5-6 2026
Broomfield, CO

Call to Action

- Oracle invites developers, testers, and community members to participate.
- Upcoming public discussions in July
 - Propose suggestions to help us meet and document goals.
- Together, we can shape the future of MySQL.
